CIRCULAR LETTER TO ALL MEMBER COMPANIES

Re: Workers Compensation Insurance

Item U-1386 – URE WCSP Pension Table Revisions

The Bureau has adopted and the North Carolina Commissioner of Insurance has approved changes which will be reflected in the ***North Carolina Statistical Plan Manual*** to update the pension tables.

The attached Filing Memorandum describes the changes which have been approved to become effective May 13, 2004, applicable to new and renewal business only.

Additionally, please reference the changes that have been documented in the electronic version of the North Carolina Statistical Plan Manual found on the North Carolina Rate Bureau web site at http://www.ncrb.org/ncrb/workers_comp_services/forms/NCRB_Stat_Plan_Manual.pdf.

Sincerely,

Sue Taylor

FILING MEMORANDUM

ITEM U-1386 AMENDED—URE WCSP PENSION TABLE REVISIONS (1999 MORTALITY)

(To become effective as of 12:01 a.m., May 13, 2004.)

PURPOSE

The purpose of this filing is to update the pension tables contained in the **URE Workers Compensation Statistical Plan** (Part 8) using data from the 1999 *United States Life Tables* and data contained in the 1980 *United States Railroad Retirement Board Remarriage Table*.

The changes vary by age and gender and reflect the new life expectancies and remarriage rates.

In addition, the examples contained in the Pension Table Guide will be modified to reflect this new data.

Upon approval, the Pension Table Guide and new Pension Tables will be incorporated into the **URE Workers Compensation Statistical Plan** (Part 8).

BACKGROUND

The pension tables are included in the **URE Workers Compensation Statistical Plan** manual. These tables are used to determine the present value of annuities for fatal and permanent total injuries that result in a pension. The values are used for reporting data to NCCI and for setting residual market reserves for pension claims.

All of the tables use a 3.5% discount rate. The tables for permanent total injuries allow for a selection of the gender of the injured worker, because the life expectancy for males is different than for females. The fatal injury tables assume the survivor is female and includes the probability of remarriage. Both the permanent total and fatal tables allow for a selection of different benefit escalation rates.

The current January 1, 2000 Pension Tables are based on two sources to reflect life expectancies and remarriage rates. The source used for the **life expectancies** is the 1989–91 U.S. Decennial Life Tables from the National Center for Health Statistics (U.S. Department of HHS). These decennial tables were unabridged (no grouping of ages) and go to age 110. The source for the **remarriage rates** is the New York Aggregate Trust Fund, which is based on a limited amount of data for accidents between 1904 and 1977.

PROPOSAL

The proposal is to replace the January 1, 2000 Pension Tables with the proposed January 1, 2004 Pension Tables that contain updated data for **life expectancies** and **remarriage rates**.

These Pension Tables are periodically updated to keep them relevant to changing conditions with respect to life expectancies and remarriage rates. The replacement tables incorporate the updated mortality figures, the differences in mortality due to gender, and likelihood of remarriage.

The proposed Pension Tables utilize updated source data as follows:

The updated source data for **life expectancies** in the proposed Pension Tables are based on the 1999 *United States Life Tables*, produced by the U.S. Department of HHS. This source is the updated version of the source used to compile the prior Pension Tables. The 1999 *United States Life Tables* are based on the U.S. Census Tables and is the most comprehensive source of data available for life expectancies. Starting in 1997, the National Center for Health Statistics (U.S. Department of HHS) provides annual unabridged updates that go to age 100.

ITEM U-1386 AMENDED—URE WCSP PENSION TABLE REVISIONS (1999 MORTALITY)

The updated source data for **remarriage rates** in the proposed Pension Tables are based on the 1980 United States Railroad Retirement Board Remarriage Table, utilizing data from 1975–1978. This new data source for remarriage rates is a broader source based on countrywide data and reflects the most current data available.

The January 2004 Pension Tables are proposed for the **URE Workers Compensation Statistical Plan** and contain replacement values within the five basic types of tables as follows:

- Surviving Spouse Pension Tables
- Present Value of Remarriage Dowry Tables
- Pension Tables (Other than Surviving Spouse)
- Present Value of Survivorship Benefits
- Basic and Supplemental Benefits for Florida

Additionally, there are four examples in the Pension Table Section that demonstrate the use of the tables. The proposal is to replace these four examples with the four attached examples that reflect the updated data.

ITEM U-1386 AMENDED—URE WCSP PENSION TABLE REVISIONS (1999 MORTALITY)

IMPACT

The overall impact of updating the Pension Tables varies by age and gender for the new life expectancies and remarriage rates. The following is a brief summary and quantification of the changes:

Life Expectancies—The data shows males are living slightly longer. For a male claimant, on average, the annuity value will increase by 2.7%. The female life expectancies increase slightly. For a female claimant, on average, the annuity value will increase by 0.5%.

Remarriage Rates—The remarriage rates are higher at ages between 25 and 50 than those previously used. Beyond age 50, they are very similar. The average change for the remarriage rate is a decrease of 6.3%. The result is a small decrease to the present value of a remarriage dowry.

IMPLEMENTATION

It is proposed that the new tables become effective for all unit report valuations on or after January 2004. Attached exhibits are the new Pension Table Guide and Pension Tables. Upon approval, the Pension Table Guide and new Pension Tables will be incorporated in the ***URE Workers Compensation Statistical Plan***.

Note: The Supplemental Benefits in Florida are 5.0% times the number of calendar years since the date of injury. For accident dates before July 1, 1990, Supplemental Benefits are payable for life. For accident dates on or after July 1, 1990, there have been several court cases dealing with Supplemental Benefits and whether or not they cease at age 62 if the individual is eligible for Social Security. Annuity values have been provided under both scenarios.

Supplemental Benefits for accident dates prior to 7/1/84 are payable from Workers Compensation Trust Fund; for accident dates after 7/1/84, Supplemental Benefits are payable by the employer/carrier. The above present values are based on the 1999 United States Life Tables with an interest rate of 3.5%.

Basic benefits present value (PV) = \bar{a}_x . Supplemental benefits payable for life PV = $.05(\bar{a}_x)$. Supplemental benefits payable to age 62 PV = $.05(\bar{a}_{x:62-x})$.

For cases where the evaluation year is not the same as the accident year and the supplemental benefits are payable for life, the present value of the Supplemental Benefit should be calculated as follows: $[(\text{evaluation year}-\text{accident year} - 1) * (.05) * (\bar{a}_x)] + [(\bar{a}_x * (.05)]$ where x is the age at evaluation.

For cases where the evaluation year is not the same as the accident year and the Supplemental Benefits are payable only until age 62, the present value of the Supplemental Benefit should be calculated as follows: $[(\text{evaluation year}-\text{accident year} - 1) * (.05) * (\bar{a}_{x:62-x})] + [(\bar{a}_{x:62-x} * (.05)]$ where x is the age at evaluation.

Note: The Supplemental Benefits in Florida are 5.0% times the number of calendar years since the date of injury. For accident dates before July 1, 1990, Supplemental Benefits are payable for life. For accident dates on or after July 1, 1990, there have been several court cases dealing with Supplemental Benefits and whether or not they cease at age 62 if the individual is eligible for Social Security. Annuity values have been provided under both scenarios.

Supplemental Benefits for accident dates prior to 7/1/84 are payable from Workers Compensation Trust Fund; for accident dates after 7/1/84, Supplemental Benefits are payable by the employer/carrier. The above present values are based on the 1999 United States Life Tables with an interest rate of 3.5%.

Also, the basic benefits in Florida cease at age 75. Basic benefits present value (PV)= $\bar{a}_{x:75-x}$. Supplemental benefits PV = $.03(\bar{a})_{x:62-x}$. For cases where the evaluation year is not the same as the accident year, the PV of the supplemental benefit should be calculated as follows: $[(\text{evaluation year}-\text{accident year}-1) * (.03) * (\bar{a})_{x:75-x}] + [(\bar{a})_{x:62-x} * (.03)]$ where x is the age at evaluation.
