

February 26, 2021

Honorable Mike Causey
Commissioner of Insurance
North Carolina Department of Insurance
Raleigh, North Carolina 27699

Re: Revision of Mobile Homeowner's MH(C) Insurance Rates

Dear Sir:

Enclosed herewith for filing on behalf of all member companies of the North Carolina Rate Bureau are revised premium rates, rating factors, and manual rules for Mobile Homeowner's MH(C) insurance subject to the jurisdiction of the Rate Bureau.

The enclosed memoranda and exhibits set forth and explain the calculations of proposed rate level changes that have been capped to produce an overall statewide average rate level change of 11.3%, comprised of a +11.3% change for all MH(C) property coverages combined and a +11.8% change for MH(C) liability coverages. The caps on the rate level changes have been included in order to reduce the impact of the rate increases on policyholders, with the goal of increasing the rates to adequate levels in a more gradual manner. The filing shows the filed rate levels varying by territory, revised windstorm and hail exclusion credits, revised amount of insurance relativities, and new deductible options.

The foregoing changes were calculated based on rates currently in force and reflect consideration duly given to data for the experience period set forth herein. Ratios in the filing relating to expense experience were developed from special calls issued by the Rate Bureau. In preparing this filing, due consideration has been given to the factors specified in G.S. 58-36-10(2) and G.S. 58-36-10(7).

Information and statistical data required pursuant to G.S. 58-36-15 and 11 NCAC 10.1105 are shown and referenced in RB-1, Section E. Additionally, the pre-filed testimony of (a) Ray Evans – General Manager; (b) Paul Anderson – Milliman, Inc.; (c) Minchong Mao – Aon; (d) Stephen Fiete – Aon; (e) Dr. James Vander Weide, Financial Strategy Associates; and (f) Dr. George Zanjani are submitted herewith.

The foregoing changes are to become effective in accordance with the following Rule of Application:

These changes are applicable to all new and renewal policies written to become effective on or after November 1, 2021.

Your approval of this filing is respectfully requested.

Very truly yours,

A handwritten signature in black ink that reads "Joanna Biliouris". The signature is written in a cursive, flowing style.

Joanna Biliouris
Chief Operating Officer

Enclosure

North Carolina Mobile Homeowners MH(C) Program

Explanatory Memorandum

This memorandum has been prepared in support of the North Carolina Rate Bureau's ("NCRB") proposed revision to the North Carolina Mobile Homeowners MH(C) program. The rate indications developed in this analysis assume an effective date of November 1, 2021 and assume rates will be in effect for one year.

Note that Mobile Homeowners MH(C) policies provide flood coverage, including coverage for both inland flood and storm surge. Accordingly, the analysis underlying this rate filing includes both types of flood losses.

In this filing, the term "hurricane losses" refers to losses identified as being caused by a hurricane and is intended to include hurricane wind losses and storm surge flood losses. The term "catastrophe" generally refers to all losses identified as being caused by a catastrophe, including but not limited to hurricane, inland flood, and non-hurricane windstorm losses.

Premium, Loss, and Expense Experience

This proposed revision is based on the combined premium and loss experience of all licensed companies writing Mobile Homeowners MH(C) insurance in North Carolina, except as noted in *Section E, Supplemental Information*.

The rate indication and rating plan analyses included in this filing were performed using data for calendar/accident years 2015 through 2019 provided by all member companies writing Mobile Homeowners MH(C) insurance in North Carolina. The data provided by member companies was collected and combined by Milliman, Inc. (Milliman) at the direction of the North Carolina Rate Bureau. The data was reviewed by Milliman for reasonability and consistency. In this filing, the above-mentioned data will be referred to as the "data provided by member companies." More information regarding the data editing procedures used by Milliman can be found in *Section E, Supplemental Information*.

The data provided by member companies included both loss and allocated loss adjustment expenses (ALAE), and these items were combined for the purpose of this analysis. The terms "loss" and "losses", as used in this memorandum, represent losses and ALAE combined. Underwriting expense, unallocated loss adjustment expense, and deviations data used in the analysis were provided and reviewed by the North Carolina Rate Bureau.

Statewide Indicated Rate Changes

The overall statewide indicated rate changes were calculated separately for Mobile Home Structures, Adjacent Structures, Personal Effects, and Liability. The following describes the key elements of the statewide indications:

- **Loss Experience** - The Mobile Homeowners insurance experience for the MH(C) program was compiled on a calendar/accident year basis for the five-year period beginning with the year ending December 31, 2015 and continuing through the year ending December 31, 2019, the most recent period for which such experience is available. For each twelve-month period, the accident year experience reflects losses from accidents occurring during that period with the premiums and number of mobile home exposures "earned" during the same period. Since this filing utilizes

modeled hurricane losses, the actual hurricane losses (which include wind losses and storm surge losses) have been removed from the loss experience used for the rate indications.

The losses compiled for each accident year are incurred losses (i.e., paid losses plus outstanding case loss reserves).

- **Excess Wind Losses and Excess Wind Loss Factor** – Because hurricane and other large-scale wind loss events are highly volatile in nature, both hurricane models and an excess wind procedure were used to achieve stability and adequacy in the indicated rates. As a result, extreme shifts in the rates (either upward or downward) due to the occurrence or non-occurrence of hurricanes or other large wind losses will be avoided. The excess wind procedure used for non-hurricane wind losses is described below. Modeled hurricane losses are discussed later in this memorandum.

Statewide excess wind losses are calculated for each accident year by first removing actual hurricane wind and storm surge losses and then determining an expected long-term ratio of wind losses relative to total non-hurricane losses excluding wind and flood losses. In determining the expected long-term ratio of wind losses to total non-hurricane losses excluding wind and flood losses, the historical ratios for accident years in which unusually large wind losses were incurred are capped at five times the median statewide wind-to-total-minus-wind-and-flood ratio.

All losses in excess of this expected wind ratio are defined as excess wind losses. The ratio of wind losses to total non-hurricane losses excluding wind and flood losses for a given year is composed of two parts:

- (1) The capped excess wind loss ratio; and
- (2) The excess wind loss ratio above the cap.

The resulting actual excess wind losses identified using the methodology above are then removed from the loss experience used in developing rates. The long-term impact of excess losses (i.e., losses not related to hurricanes and, therefore, not accounted for in the hurricane model) is accounted for in the rates through the use of an excess wind factor, which is calculated using the following formula:

$$\text{Excess Wind Loss Factor} = 1.0 + \frac{[(\text{Avg Capped Excess Ratio} + \text{Avg Excess Ratio above the Cap})]}{(1.0 + \text{Expected Ratio} - \text{Avg Capped Excess Wind Ratio})}$$

The excess wind methodology for all MH(C) Property coverages combined can be found on *Section C, Page 43*.

To determine excess wind losses for each MH(C) Property coverage, the total Property excess wind losses for each accident year were allocated based on the distribution of incurred wind losses by coverage (see *Section C, Page 44*). Note: the excess wind method is not applicable to the development of the rate indication for the MH(C) Liability coverage.

- **Excess Flood Losses and Excess Flood Loss Factor** – Because flood loss events are highly volatile in nature, an excess flood procedure was used to achieve stability and adequacy in the indicated rates. The excess flood procedure used was analogous to the excess wind procedure described above.

Statewide excess flood losses are calculated for each accident year by first removing actual hurricane flood (i.e. storm surge) losses and then determining an expected long-term ratio of flood

losses relative to total non-hurricane losses excluding wind and flood losses. In determining the expected long-term ratio of flood losses to total non-hurricane losses excluding wind and flood losses, the historical ratios for accident years in which unusually large flood losses were incurred are capped at five times the median statewide flood-to-total-minus-wind-and-flood ratio.

All losses in excess of this expected flood ratio are defined as excess flood losses. The ratio of flood losses to total non-hurricane losses excluding wind and flood losses for a given year is composed of two parts:

- (1) The capped excess flood loss ratio; and
- (2) The excess flood loss ratio above the cap.

The resulting actual excess flood losses identified using the methodology above are then removed from the loss experience used in developing rates. The long-term impact of excess losses (i.e., losses not related to hurricanes and, therefore, not accounted for in the hurricane model) is accounted for in the rates through the use of an excess flood factor, which is calculated using the following formula:

$$\text{Excess Flood Loss Factor} = 1.0 + \frac{[(\text{Avg Capped Excess Ratio} + \text{Avg Excess Ratio above the Cap})]}{(1.0 + \text{Expected Ratio} - \text{Avg Capped Excess Flood Ratio})}$$

The excess flood methodology for all MH(C) Property coverages combined can be found on *Section C, Page 45*.

To determine excess flood losses for each MH(C) Property coverage, the total Property excess flood losses for each accident year were allocated based on the distribution of incurred flood losses by coverage (see *Section C, Page 46*). Note: the excess flood method is not applicable to the development of the rate indication for the MH(C) Liability coverage.

- **Loss and Claim Development** – To develop the incurred Mobile Homeowners losses and reported claims to ultimate, cumulative loss development factors (LDFs) and cumulative claim development factors (CDFs) are applied to incurred losses and reported claims, respectively. To derive these factors, Mobile Homeowners loss and claim triangles were constructed using data provided by member companies. These triangles were aggregated separately by coverage. Using these aggregate triangles, age-to-age LDFs and CDFs were selected and age-to-ultimate LDFs and CDFs were calculated (see *Section C, Pages 47 through 54*).
- **Unallocated Loss Adjustment Expenses (ULAE)** – The incurred losses used in the rate indication do not include ULAE. To account for these expenses, the incurred losses were multiplied by a ULAE factor selected based on five years of historical incurred ULAE-to-incurred loss & ALAE ratios provided by the North Carolina Rate Bureau. A separate selected catastrophe LAE factor was used for modeled hurricane losses (see *Section C, Page 73*). See pre-filed testimony of S. Fiete for support of the catastrophe LAE factor.
- **Loss Trend** – To trend losses, frequency and severity trends were selected by coverage based on six years of quarterly claims data provided by member companies.

So as not to distort the indicated trends, historical catastrophe losses were removed from the loss and claim count data. Because catastrophe losses other than hurricane and flood were not explicitly identified in the data provided by member companies, weekly claim data was reviewed by peril (water and wind) in order to identify catastrophe events. For each peril, weeks during the

experience period which had reported claim counts that were greater than two times the standard deviation of weekly reported claims were identified as having catastrophe events. The claims and losses for each peril that occurred during those weeks were excluded from the loss trend analysis.

In order to evaluate trends, both claims and losses were developed to ultimate based on the cumulative claim and loss development factors discussed above. In order to apply these annual development factors to quarterly claims and losses, the factors were interpolated exponentially to derive quarterly development factors.

In trending losses, a two-step trending procedure was used. Frequency and severity trend rates were selected by coverage separately for the experience trend period and the projection trend period. The experience trend period is defined as the first calendar-accident day associated with the data provided by member companies, or January 1, 2015, up to and including the last calendar-accident day provided in the data provided by member companies, or December 31, 2019. The projection trend period is defined as the end date of the experience period, or December 31, 2019, up to the average accident date of the one-year policy period during which the rates are projected to be in effect, or November 1, 2022. Loss trend rates were then calculated for each coverage using the following formula:

$$\text{Loss Trend Rate} = (1 + \text{Frequency Trend Rate}) \times (1 + \text{Severity Trend Rate}) - 1.$$

Loss trend factors were calculated by coverage for each accident year based on the selected loss trend rates and trend periods. For each accident year, the experience period is calculated as the amount of time from the average accident date within the accident year to the end of the experience period, or December 31, 2019. The projection period is calculated for all accident years as the amount of time from the end date of the experience period, or December 31, 2019, up to the average accident date of the one-year policy period during which the rates are projected to be in effect, or November 1, 2022.

The selected frequency, severity, and loss trend rates, as well as the resulting loss trend factors for each MH(C) coverage are shown in *Section C, Pages 57 through 60*. The calculation of the loss trend factors for each of the MH(C) coverages is shown in *Section C, Pages 55 and 56*. *Section C, Page 61* shows the interpolation of the cumulative development factors.

- **Exposure Trend** – Exposure trends were selected by coverage to account for changes in the amounts of insurance purchased by policyholders over time. The indicated exposure trend rates were calculated based on the average amount of insurance per policy (see *Section C, Pages 62 and 63*). The selected exposure trends were provided to Aon to be applied during the process of determining modeled hurricane losses.
- **Premium Trend** – Premium trends were selected by coverage to account for changes in the average premium per policy over time. The indicated premium trend rates were calculated based on the average rating factors for each accident year and for each coverage.

The historical average rating factors were used to calculate various estimates of the average annual change in premium. Similar to the loss trends, premium trend rates were selected separately for the experience period and the projection period (see *Section C, Page 65*). The experience trend period is defined as the first calendar accident day associated with the data provided by member companies, or January 1, 2015, up to and including the last calendar accident day provided in the statistical plan data, or December 31, 2019. The projection trend period is defined as the end date

of the experience period, or December 31, 2019, up to the average written date of the period during which the rates are projected to be in effect, or May 1, 2022.

Following the selection of premium trend rates by coverage, premium trend factors were calculated for each accident year based on the selected premium trend rates and trend periods. For each calendar year, the experience period is calculated as the amount of time from the average written date within the calendar year to the end of the experience period, or December 31, 2019. The projection period is calculated for all calendar years as the amount of time from the end date of the experience period, or December 31, 2019, up to the average written date of the period during which the rates are projected to be in effect, or May 1, 2022 (see *Section C, Pages 64*).

- Average Rating Factors** – The rate indications included within this filing are calculated at a base class level. In order to convert the historical experience to a consistent base class level, average rating factors are used. The average rating factors represent the ratio of the average premium (earned premium at current manual rate level divided by the number of earned house years) and the average base class premium. Earned premiums at current manual rates are calculated using the extension of exposures method, which multiplies the rates in effect at the time of the review by the number of earned house years for each risk in the data provided by member companies. The current base class rate used in the rate indication is defined by the following policy characteristics for each MH(C) coverage:

Current MH(C) Base Class Definitions					
Coverage	Amount of Insurance	Deductible	Policy Form	Occupancy	Tie-Down Credit
Mobile Home Structures	\$20,000	\$250	Named Perils	Owner-Occupied	No
Adjacent Structures	\$2,000	\$250	Named Perils	Owner-Occupied	No
Personal Effects	\$5,000	\$250	All Perils	N/A	No
Liability	\$25,000	N/A	N/A	N/A	N/A

The policy characteristics of the current base class, which are used to convert the historical experience to a consistent level for the purposes of calculating indicated rate changes, are not necessarily the same as the base policy characteristics presented in the current MH(C) rate manual from which policyholder premiums are calculated.

- Credibility** – Credibility of the historical experience was considered in several places throughout this filing, including in the determination of the total base class loss cost calculated for each coverage and each territory as well as in the selection of loss trends.

To determine the credibility of the non-hurricane mobile homeowners loss costs for each coverage, a limited fluctuation credibility methodology was used, as explained in a CAS Proceedings Paper “*Credibility of the Pure Premium*” by Mayerson, Jones, and Bowers. This methodology assumes that Mobile Homeowners loss costs are normally distributed and the standard for full credibility is based on a 90% probability that the observed loss cost is within 10% of the expected loss cost. The methodology is intended to limit the effect that random fluctuations in the data can have on the indicated loss cost.

Based on the limited fluctuation credibility model framework, the formula for the full credibility standard (N_C) is equal to:

$$N_C = (z / k)^2 = 271$$

where: N_C = # of claims required for full credibility (rounded to nearest integer)
 z = 1.645 (from the standard normal table corresponding to a 90% confidence interval)
 k = 10% (tolerance for error)

For each coverage, the number of claims, N_C , required for full credibility from the formula above was converted from a claims basis into an earned house years basis using a frequency and severity modification. This conversion was performed using the five-year historical frequency, average severity, and variance of the severity distribution for each coverage in the following formula:

$$N_E = (N_C / f) \times (1 + \sigma^2 / s^2) = 30,000$$

where: N_E = # of earned house years required for full credibility (rounded up to nearest 10,000)
 f = Five-Year Claim Frequency
 σ^2 = Variance of the Severity Distribution
 s = Average Claim Severity

Using N_E as the standard for full credibility, the credibility (Z) for each statewide coverage and each territory or territory group was calculated using the standard Square Root Rule or:

$$Z = (E / N_E)^{0.5}$$

where: Z = Credibility of Segment (limited to a maximum of 1.00)
 E = Five-Year Earned House Years

The table below displays the standard for full credibility for each coverage, the statewide total house years during the experience period, and the calculated credibility:

Coverage	Standard (N_E)	Earned House Years (E)	Credibility (Z)
Mobile Home Structures	30,000	420,316	100.0%
Adjacent Structures	90,000	372,180	100.0%
Personal Effects	90,000	413,958	100.0%
Liability	1,620,000	412,459	50.5%

The credibility-weighted loss cost from the NCRB's 2019 mobile home rate filing (trended to the proposed policy period) was used as the complement of credibility (CC) such that the credibility-weighted loss cost (LC_{CW}) is calculated as:

$$LC_{CW} = LC \times Z + CC \times (1.0 - Z)$$

where: LC_{CW} = Credibility-Weighted Loss Cost
 LC = Indicated Base Class Loss Cost
 CC = Complement of Credibility

To calculate the credibility of the indicated loss trends, limited fluctuation credibility was also used. A claims standard of 1,082 was used, which represents the number of claims needed to be within 5% of the expected trends with 90% probability. As the credibility was only used for informational purposes when making trend selections, no complement of credibility was used.

- **Modeled Hurricane Loss Costs** – Statewide average annual hurricane losses for each MH(C) property coverage were provided by Aon evaluated as of December 31, 2019. The losses provided are based on an average of the AIR Touchstone v7.3 hurricane model and the RMS RiskLink v18.1 hurricane model. The losses were determined based on exposures that had been trended to the proposed policy period and were loaded for LAE using the selected 6.0% catastrophe LAE factor. On *Section C, Page 69*, the modeled hurricane losses are divided by the product of the 2019 earned house years, the 2019 average rating factor, and the 2019 premium trend factor to derive the modeled hurricane base class loss cost for each coverage.
- **Underwriting Expenses** – *Section C, Page 72* shows five years of aggregate premium and aggregate underwriting expenses for all companies writing MH(C) coverage in North Carolina. The expense ratios shown for Commission & Brokerage and for Taxes, Licenses, & Fees use written premium as the denominator because these expenses are typically incurred when policies are written. The ratios for Other Acquisition and General Expenses use earned premium as the denominator because these expenses are typically incurred over the entire length of the policy. The selected expense ratios reflect an average of the historical ratios over the last three years for each expense item. The sum of the expense ratios for Commission & Brokerage expenses and Taxes, Licenses, and Fees comprise the prospective policy's variable expense load whereas the sum of the expense ratios for Other Acquisition and General Expense comprise the fixed expense load.
- **Expense Trend** – Trend rates for fixed expenses, similar to loss trend rates, were selected separately for the experience period and the projection period. Indicated expense trend rates were derived from several different expense indices – the Consumer Price Index (including all items), the Consumer Price Index (all items excluding Energy), and the Compensation Cost Index. Additionally, a blended indication was derived by using a weighted average of the three indices with weights of 25%, 25%, and 50%, respectively.

The selected expense trend rates are used to calculate expense trend factors by coverage, which are used in the calculation of the fixed expense per policy. *Section C, Page 71* shows the derivation of the expense trend factors, which are calculated in a manner similar to the loss trend factors. The experience trend period spans from the average date of incurred expense over the most recent three years, or July 1, 2018, to the end date of the experience period, or December 31, 2019. The projection trend period spans from the end date of the experience period, or December 31, 2019, to the average written date of the prospective policy period, or May 1, 2022.

- **Fixed Expense Per Policy** – To calculate the fixed expense per policy, trended fixed expense ratios were calculated by multiplying the selected fixed expense ratios from *Section C, Page 72* by the expense trend factor and dividing by the 2018 premium trend factor (since the average date of expenses underlying the fixed expense ratios is 7/1/2018). The fixed expense per policy was then calculated by multiplying the trended fixed expense ratios by the average current base premiums.
- **Profit** – See pre-filed testimony of G. Zanjani and J. Vander Weide.
- **Contingencies** – See pre-filed testimony of P. Anderson.

- **Policyholder Dividends** – *Section C, Page 74* contains support for the selected policyholder dividends, which was selected using five years of historical homeowners dividend and written premium data. See also the pre-filed testimony of P. Anderson.
- **Compensation for Assessment Risk** – The provisions for compensation for assessment risk are calculated by coverage as $(0.029 \times \text{Current Average Base Rate}) / (1.0 - \text{Commission \& Brokerage} - \text{Taxes, Licenses, \& Fees})$, as shown in *Section C, Page 75*. The 2.9% compensation for assessment risk provision is based on an analysis completed by Milliman. See also the pre-filed testimony of P. Anderson.
- **Net Cost of Reinsurance** – The provisions for the net cost of reinsurance are based on an analysis performed by Aon. *Section C, Pages 76-78* show the average cost of reinsurance by territory group as well as the statewide total as determined based on 2019 earned house years. The base class net cost of reinsurance is then determined by adjusting the average cost of reinsurance by the 2019 average rating factor, 2019 premium trend factor, and variable expenses at both the statewide and territory group level.
- **Net Deviations** – *Section C, Page 79* compares direct written premium (including net deviations) to manual premium (excluding net deviations) by calendar year to calculate the average net deviation from manual premiums. A provision of 5.0% was selected for net deviations. See also the pre-filed testimony of P. Anderson.

Indicated Rate Changes by Territory Group

In addition to the statewide rate indications, rate changes by territory group were also calculated for each coverage except Liability. The methodology for calculating the indicated rate changes at the territory group level is generally the same as the methodology used to produce the statewide indication. To calculate the indications by territory group, indicated base class loss costs (*Section C, Pages 10-20, 21-31, and 32-42*), trended fixed expenses, the compensation for assessment risk, and the net cost of reinsurance (*Section C, Pages 76 through 78*) are calculated for each territory group and each coverage. The statewide excess wind and excess flood losses by coverage were allocated to each territory group using the distribution of wind and flood losses by accident year (see *Section C, Pages 19, 20, 30, 31, 41, and 42*). The indicated base rate excluding deviations was then calculated for each territory group for each coverage. The deviation per exposure was then added to the indicated base rates by territory group to derive the indicated required base class rate by territory group. Indicated rate changes were subsequently calculated by comparing the indicated required base class rate to the current base rate. See *Section C, Pages 10, 21, and 32* for more details.

Rating Plan Analysis

With this filing, the North Carolina Rate Bureau is proposing to update the Mobile Homeowners MH(C) rating structure with the following changes:

- **Amount of Insurance** – This filing proposes to update the amount of insurance relativities used for Mobile Home Structures, Adjacent Structures, and Personal Effects, as well as the increased limit factors for Liability.
- **Deductibles** – With this filing, several new deductible options are being introduced, including all peril deductible options of \$750, \$1,000, \$2,000, and \$5,000; optional higher windstorm or hail

deductible options of 1%, 2%, and 5%; and optional named storm deductible options of 2% and 5%.

The following describes the analysis that was performed and used to select the proposed rating factors or premium credits associated with the changes described above.

Amount of Insurance

A one-way pure premium analysis of Amount of Insurance analysis was performed for the following coverages:

- MH(C) – Mobile Home Structures;
- MH(C) – Adjacent Structures;
- MH(C) – Personal Effects; and
- MH(C) – Liability.

For all reviewed coverages, indicated pure premium relativities were developed based on non-catastrophe incurred losses, which were indexed to a base amount of insurance for each coverage. To smooth the volatility in the indicated relativities and ensure there are no reversals in the rating factors, linear regressions were fit to the indicated pure premium relativities.

The amount of insurance analysis can be found on *Section D, Pages 1 through 5*.

Deductible

With this filing, several new deductible options are being introduced, including all peril deductible options of \$750, \$1,000, \$2,000, and \$5,000; optional higher windstorm or hail deductible options of 1%, 2%, and 5%; and optional named storm deductible options of 2% and 5%.

The proposed premium credits for the new deductible options were determined using linear interpolation and extrapolation of the premium credits for the current deductibles. The Miccolis Consistency Test was relied on to assess the reasonability of the proposed premium credits for the new deductible options.

The deductible analysis can be found on *Section D, Pages 6 through 22*.

MH(C) Program**

Mocked Up Rules

MOBILE HOMEOWNERS POLICY: MH(C) PROGRAM

7. Changes

- a. All changes requiring adjustments of premium shall be computed pro rata.
- b. If a mobile home or a form of coverage that was cancelled from a policy at the request of the insured is reinstated within 30 days, the premium will be the same as the amount that was returned at the time of cancellation.
- c. Minimum Premiums: If an outstanding policy is amended and results in a premium adjustment, that adjustment shall not be less than \$6.00, except that the actual return premium will be allowed at the request of the insured.

8. Cancellation Rule

Cancellation may be effected as follows:

- a. The insured can cancel the policy by mailing to the Company a written notice telling the Company the future date cancellation is to be effective. If a lien holder is named on Page One of the policy, the Company will mail to the lien holder ten days written notice of cancellation of the lien holder's interest in this policy.
- b. When a lien holder named in the policy has repossessed or has otherwise acquired ownership of the mobile home, the lien holder may, for the account of all parties at interest under the policy, cancel the policy by surrendering it to the Company.
- c. The Company can cancel the policy for any reason during the first 60 days. The Company can cancel the policy after the first 60 days only if the insured or his representative:
 - Conceal, omit or misrepresent any material facts or circumstances, or make a false or fraudulent claim, or
 - Fail to comply with any governmental requirement regulating mobile home tie-down or anchoring systems, or
 - Have knowledge of any change that substantially increases the risk assumed by the Company without notifying the Company, and paying any required premium for the increased risk, or
 - Has not paid the premium.
 - The Company will mail a cancellation notice to the insured at least 30 days (non-payment 10 days) before the policy is cancelled. The Company will mail a cancellation notice to the insured's last address known to the Company or the agent. The Company will also give the same notice to the lien holder.
- d. Computation
 - (1) Cancellation by the named insured on any policy within one year of its inception date will be computed short rate, using the appropriate short rate chart. All other cancellations will be pro rata.
 - (2) Cancellation by any other party at interest will be pro rata regardless of policy term.
 - (3) No endorsement will have the effect of violating the Written or Earned Premium rules.

9. Tenants Coverage Rule

The Mobile Home Owner Policy MH(C) may also be issued to a tenant (non-owner) of a mobile home, for any of the following coverages:

- a. Comprehensive Personal Effects;
- b. Comprehensive or Named Perils Adjacent Structures;
- c. Liability.

If the policy includes Comprehensive Personal Effects Coverage, Mobile Home Tenants Coverage Endorsement is to be attached automatically affording the following additional policy coverages:

- a. Additional Living Expense;
- b. Fire Department service;
- c. Credit Card and Depositors Forgery.

The additional coverages are excess over any other collectible insurance.

MOBILE HOMEOWNERS POLICY: MH(C) PROGRAM

10. Natural Disaster Protection Rules

Coverage may be afforded under each policy insuring a financed mobile home. It amends the amount of the Company's liability to the outstanding principal balance of the loan or the amount which would be recoverable under the policy, whichever is greater, if total loss results from Perils covered. For rate information, refer to the Rate Section.

11. Seasonal/Vacation Mobile Home Rule

A seasonal/vacation mobile home is defined as a mobile home that is not the primary residence of the insured, but one that is used on an intermittent basis by the insured and his (her) immediate family. It may not be rented to others. Mobile homes that are rented to others for seasonal or vacation use are not eligible for the Mobile Home Owner Policy MH(C). A minimum deductible of \$250 shall automatically apply to Comprehensive or Named Perils Mobile Home Structures Coverage, Comprehensive Personal Effects Coverage, and Comprehensive or Named Perils Adjacent Structures Coverage.

12. Deductible Rule

The basic rates in the Rate Section contemplate a \$100 deductible for *Comprehensive* Primary Residence and Tenants, \$0 deductible for *Named Perils* Primary Residence and Tenants, and \$250 deductible for *Comprehensive and Named Perils* Seasonal/Vacation. This deductible amount may be modified as provided for in the rate section.

In Territories 110, 120, 130, 140, 150, and 160, the Mobile Homeowners Policy may be endorsed to provide an optional Windstorm or Hail Deductible used in conjunction with the deductibles applicable to All Other Perils. This option provides for higher dollar deductible amounts of \$1,000, \$2,000, and \$5,000, 1%, 2%, and 5% when the higher deductible amount selected exceeds the deductible applicable to All Other Perils.

In Territories 110, 120, 130, 140, 150, and 160, the Mobile Homeowners Policy may be endorsed to provide a Named Storm Percentage Deductible of 1%, 2%, and 5% of the Mobile Home Structures, Adjacent Structures, or Comprehensive Personal Effects limit of liability, whichever is greatest, when the dollar amount of the percentage deductible exceeds the deductible applicable to All Other Perils. Use **MH(C)-320** Named Storm Percentage Deductible.

13. Fire Department Service Charge

The \$100 Fire Department Service Charge may be increased for an additional premium as provided for in the Rate Section.

14. Radio and Television Antenna Coverage

The \$50 Radio and Antenna Coverage may be increased for an additional premium as provided for in the Rate Section.

15. Inflation Coverage

This form may be attached to the policy when the mobile home is used as the primary residence or as a seasonal/vacation residence. For rate information, refer to the Rate Section.

16. Rentals

A Mobile Home Owner Policy MH(C) may be written to cover the interest of the owners of a rented mobile home.

17. Tie-Down:

When the mobile home is properly secured in accordance with the regulations of the North Carolina Building Code Council as set forth in the State of North Carolina Regulations for mobile homes, a credit of 10% shall be deducted from the rates applicable to the following coverages:

- a. Comprehensive or Named Perils Mobile Home Structures Coverage
- b. Comprehensive Personal Effects Coverage

18. Personal Effects Replacement Cost

For an additional premium your policy may be extended to cover the full cost of repair or replacement without deduction for depreciation of your personal effects. For rate information see Rate Section.

Attach Comprehensive Personal Effects Replacement Cost Endorsement.

**WINDSTORM OR HAIL DEDUCTIBLES
TERRITORY GROUPS 1 AND 2 ONLY**

The Windstorm or Hail Deductible options are used in conjunction with the deductibles applicable to All Other Perils. This option provides for higher dollar deductible amounts of \$1,000, \$2,000, and \$5,000 when the higher deductible amount selected exceeds the deductible applicable to All Other Perils.

An endorsement is not required. Separately enter on the policy declarations the deductible amounts that apply to Windstorm or Hail and All Other Perils. For example: Deductible - \$500 except \$1,000 for Windstorm or Hail.

The factors displayed incorporate the factors for the All Perils Deductibles. Do not use the factors for the All Perils Deductibles when rating a policy with a higher Windstorm or Hail deductible.

COMPREHENSIVE

The Windstorm or Hail Deductible factor applies to the \$100 Deductible rate.

NORTH CAROLINA

**WINDSTORM OR HAIL DEDUCTIBLES
TERRITORY GROUPS 1 AND 2 ONLY**

The Windstorm or Hail Deductible options are used in conjunction with the deductibles applicable to All Other Perils. This option provides for higher dollar deductible amounts of \$1,000, \$2,000, \$5,000, 1%, 2%, and 5% when the higher deductible amount selected exceeds the deductible applicable to All Other Perils.

An endorsement is not required. Separately enter on the policy declarations the deductible amounts that apply to Windstorm or Hail and All Other Perils. For example: Deductible - \$500 except \$1,000 for Windstorm or Hail.

The factors displayed incorporate the factors for the All Perils Deductibles. Do not use the factors for the All Perils Deductibles when rating a policy with a higher Windstorm or Hail deductible.

TRIP COVERAGE

30 Day Trip; \$100 Deductible = \$25

NATURAL DISASTER PROTECTION COVERAGE

A \$3.00 premium charge per mobile home shall apply

FIRE DEPARTMENT SERVICE CHARGE

Additional Amounts of Insurance:

\$2.00 per \$100 of Insurance
Maximum additional Amount of Insurance = \$400

RADIO AND TELEVISION ANTENNA COVERAGE

Additional Amounts of Insurance:

\$5.00 per \$100 of Insurance
Maximum additional Amount of Insurance = \$2,500

MEDICAL PAYMENTS TO OTHERS

Additional Limit	Premium
\$1,000	\$3.00

LIABILITY

\$500 Medical Payments to Others Coverage and \$250 Damage to Property of Others automatically included.

Personal Liability Coverages	
Limits	Premium
\$25,000	\$22.72
50,000	26.37
100,000	31.84
200,000	35.49
250,000	37.89
300,000	40.20

INFLATION COVERAGE

\$5.00 per mobile home

DETERMINATION OF TERM PREMIUMS

Multiply the 1 year unrounded premium for the specific coverage by the term factor then total and round total of all coverages.

TERM FACTORS

Apply to all Coverages:

Term	1 Year	2 Year	3 Year	4 Year	5 Year	6 Year	7 Year
Factor	1.00	2.00	3.00	3.85	4.65	5.35	6.00

PERSONAL EFFECTS REPLACEMENT COST ENDORSEMENT

\$0.30 per \$100 of Insurance
The Minimum Additional Premium is \$15.00

REPLACEMENT COST COVERAGE

When coverage is provided on a replacement cost basis, charge 5% of the premium from the premium rate table.

MOBILE HOME ADDITIONAL LIVING EXPENSE COVERAGE

\$25 per day = \$6 per mobile home
\$50 per day = \$16 per mobile home

WINDSTORM OR HAIL EXCLUSION

(Territories 110, 120, 130, 140, 150, 160)

	Territory Group 1	Territory Group 2
Mobile Home Structures	67.2%	60.8%
Adjacent Structures	54.1%	46.9%
Comprehensive Personal Effects	55.1%	44.2%

STATED VALUE LOSS SETTLEMENT

When coverage is provided on a stated value basis, charge 3% of the premium from the premium rate table.

(1), (2), (4), (5) Based on data provided by member companies

(7) = (6) / \$126.96 where \$126.96 is the linear interpolated pure premium for \$20,000 of coverage between \$111.7 and \$129.5 based on the average amount of insurance in (3)

(8) based on linear regression of (7), indexed to the current base of \$20,000. This calculation uses Excel's trend function which returns a linear trend based on the least squares method. (3) provides the known X values and (7) provides the known Y values. To index these amounts to the current base, divide by the regression value for \$20,000. For example, the amount shown in the first row of (8) = TREND[(7), (3), 3,162] / TREND[(7), (3), 20,000] = 0.620

(9) based on standard for full credibility of 1,082 and the square root rule: = SQRT [(5) / 1,082]

(10) derived from NCRB's current rate manual; Example: The rate shown for 4,000 - 5,999 is \$221.69 which is the average of the rates shown in the current manual for the 4,000 - 4,999 (\$214.98) and the 5,000 - 5,999 (\$228.40), the average rate is a weighted average based on the earned house years underlying (1)

(11) = (10) / \$435.42 where \$435.42 is the linear interpolated current rate for \$20,000 of coverage between \$412.24 and \$439.28 based on the average amount of insurance in (3)

(12) = weighted average of the current relativity in (11) and the fitted relativity in (8), giving 66.7% weight to the current relativity and 33.3% weight to the fitted relativity

(14) Amount of Insurance structure in NCRB Proposed MH(C) Rate Manual

(15) Proposed Relativities in (12) linearly interpolated based an average amount of insurance in (3)

**North Carolina
Mobile Homeowners
MH(C) - Adjacent Structures**

**Amount of Insurance Analysis
Losses Excluding Catastrophes**

(1), (2), (4), (5) Based on data provided by member companies

(7) = (6) / \$2.59 where \$2.59 is the linear interpolated pure premium for \$2,000 of coverage

(8) based on linear regression of (7), indexed to the current base of \$2,000. This calculation uses Excel's trend function which returns a linear trend based on the least squares method. (3) provides the known X values and (7)

provides the known Y values. To index these amounts to the current base, divide by the regressed value for \$2,000. For example, the amount shown in the first row of (8) = TREND[(7), (3), 335] / TREND[(7), (3), 2,000] = 0.313

Due to the volatility in the indicated relativities, only the indicated pure premium relativities up through \$9,999 were used to calculate the fitted.

(9) based on standard for full credibility of 1,082 and the square root rule; = SQRT [(5) / 1,082]

(10) derived from NCRB's current rate manual using the average amount of insurance in (3); Example: For 300 - 499, the average amount of insurance is \$335, the rate shown is \$4.92 which is the current base rate for

\$300 of coverage (\$4.41) plus the amount for an additional \$100 (\$335 - \$300) of coverage (\$1.47); the average rate is a weighted average based on the earned house years underlying (1)

(11) = (10) / \$29.40 where \$29.40 is the current rate for \$2,000 of coverage

(12) = weighted average of the current relativity in (11) and the fitted relativity in (8), giving 80.0% weight to the current relativity and 20.0% weight to the fitted relativity

(14) Amount of Insurance structure in NCRB Proposed MH(C) Rate Manual

(15) Proposed Relativities in (12) linearly interpolated based an average amount of insurance in (3)

Each Add'l \$100: 0.048

Notes:

Losses and ALAE based on data provided by member companies and include actual hurricane losses.

All amounts shown exclude Unallocated Loss Adjustment Expenses (ULAE), which were unavailable for the experience period of this filing. ULAE was accounted for in the rate indication via a 9.0% ULAE factor applied to Non-Hurricane Losses and a 6.0% LAE factor applied to Hurricane Losses (see Section C, Page 73). For Non-Hurricane losses, the ULAE factors are applied on Section C, Pages 3, 5, 7 and 9. For Hurricane losses, the LAE factor is applied by the modeler.

Notes:

Losses and ALAE based on data provided by member companies and include actual hurricane losses.

All amounts shown exclude Unallocated Loss Adjustment Expenses (ULAE), which were unavailable for the experience period of this filing. ULAE was accounted for in the rate indication via a 9.0% ULAE factor applied to Non-Hurricane Losses and a 6.0% LAE factor applied to Hurricane Losses (see Section C, Page 73). For Non-Hurricane losses, the ULAE factors are applied on Section C, Pages 3, 5, 7 and 9. For Hurricane losses, the LAE factor is applied by the modeler.

Summary of Data Adjustments

(2) Catastrophe Losses

Losses and claim counts used in the loss trend analysis were adjusted to remove catastrophe losses. This was done to prevent the volatile nature of catastrophe losses from impacting historical and projected trend selections. Because catastrophe losses other than hurricane and flood were not explicitly identified in the data provided by member companies, weekly claim data was reviewed by peril (water and wind) in order to identify catastrophe events. For each peril, weeks during the experience period which had reported claim counts that were greater than two times the standard deviation of weekly reported claims were identified as having catastrophe events. The claims and losses for each peril that occurred during those weeks were excluded from the loss trend analysis. The tables below show, by accident year for each coverage, the proportion of the total losses and claim counts removed from the analysis due to catastrophes:

Accident Year	Proportion of Losses Due to Catastrophes				Proportion of Claims Due to Catastrophes			
	Mobile Home Structures	Adjacent Structures	Personal Effects	Liability	Mobile Home Structures	Adjacent Structures	Personal Effects	Liability
2015	18.1%	56.7%	3.0%	0.0%	13.8%	47.1%	7.2%	0.0%
2016	59.1%	82.5%	52.2%	0.0%	49.1%	80.2%	49.5%	0.0%
2017	5.7%	18.7%	3.5%	0.0%	5.2%	19.6%	6.0%	0.0%
2018	72.2%	85.8%	67.0%	0.0%	59.6%	86.2%	65.3%	0.0%
2019	22.2%	35.6%	5.8%	0.0%	15.3%	43.5%	8.4%	0.0%

(3) Excess Wind Losses

Non-hurricane wind losses have been smoothed using an excess wind procedure. See the prefiled testimony of P. Anderson.

(4) Excess Flood Losses

Non-hurricane flood losses have been smoothed using an excess flood procedure. See the prefiled testimony of P. Anderson.

(5) Allocation of Data to Territory Groups

Because data provided by member companies only included zip code, the exposure, premium, and loss data needed to be allocated to the current territory definitions in instances where zip codes are located in multiple territories. The allocation in these instances was determined based on the number of mobile homes in each county/zip code/census block combination, as determined from census data. In the affected zip codes, each county/zip code/census block combination was mapped to a territory. Then, for each territory, the proportion of mobile homes within the territory out of the total mobile homes within the zip code was determined. These proportions within each territory were then used to allocate the exposure, premium, and loss data.

(6) Loss Development

Losses were developed to ultimate using loss development factors. See the prefiled testimony of P. Anderson.

(7) Loss Trend

Losses were trended to the average accident date of the policy period in which the rates are proposed to be in effect in order to bring all historical losses to a common projected cost level. See the prefiled testimony of P. Anderson.

North Carolina Administrative Code (NCAC) Title 11, Chapter 10.1105, Section (1d)
Calculation of Premium at Current Rate Level

- See Section E, Page 1, which provides the actual earned premiums and earned premiums at present rates.
- Earned premium at present rates were calculated based on the following rate order calculation formula:

Property (Mobile Home Structures, Adjacent Structures, and Personal Effects):

Earned Premium = [Base Rate for Given Amount of Insurance x Territory Factor x (1 - Tie-Down Credit) + Deductible Credit] x Earned Exposure

Liability:

Premium = Rate for Given Limit x Earned Exposure

- The following demonstrates a sample calculation for the earned premium at present rates for a single insured with Mobile Home Structures coverage of \$30,000 and a \$500 deductible, where the mobile home is located in territory group 1 and qualifies for the tie-down credit:

(1) Base Rate for \$30,000 of coverage	\$568.83
(2) Territory Group 1 Surcharge	1.719
(3) Tie-Down Credit	10%
(4) Deductible Credit for \$500 deductible	(54.07)
(5) Earned Exposure	1.000
(6) Premium at Present (Manual) Rates	\$825.97

Notes:

- (1) Assumes comprehensive coverage and that the mobile home is the insured's primary residence
- (6) = [(1) x (2) x {1 - (3)} + (4)] x (5)

Limitations

- (6a) No limitations were placed on the loss data provided by member companies included in the filing.
- (6b) Limitations were applied to the rate changes by coverage. The filed overall rate level changes for Mobile Home Structures, Adjacent Structures, Personal Effects, and Liability are 13.0%, 16.2%, 0.0%, and 11.8%, respectively.

There were no limitations on the extent of the rate level change by coverage amount, by form, by protection class, by construction, or by deductible

- (6c) Limitations were applied to the territorial rate changes as follows:

Territory Group	Proposed Rate Change				
	Mobile Home Structures	Adjacent Structures	Personal Effects	Liability	Total
1	25.0%	25.0%	15.0%	11.8%	23.4%
2	25.0%	25.0%	14.0%	11.8%	23.3%
3	25.0%	25.0%	13.0%	11.8%	22.8%
4	25.0%	25.0%	-2.5%	11.8%	20.6%
5	23.0%	25.0%	-4.0%	11.8%	19.1%
6	0.0%	6.0%	-5.0%	11.8%	0.0%

Note:

- Territory Group 1 (Territories 110, 120, 130, and 140)
 Territory Group 2 (Territories 150, and 160)
 Territory Group 3 (Territories 180, 190, 200, 210, 220, and 230)
 Territory Group 4 (Territories 170, 240, and 250)
 Territory Group 5 (Territories 260, 270, 280, 290, and 300)
 Territory Group 6 (Territories 310, 320, 330, 340, 350, 360, 370, 380, and 390)

- (6d) There were no limitations other than those mentioned above.

**North Carolina

Mobile Homeowners
MH(C)**

North Carolina Administrative Code (NCAC) Title 11, Chapter 10.1105, Section (8)
Percent Rate Change

(8a) See Section A, Page 1

(8b) The proposed rate changes reflect a proposed effective date of 11/1/2021 and also assume that the proposed rates will be in effect for one year. If the actual implementation date is later than the proposed effective date, the indicated and proposed rate changes would be impacted, as the change in the proposed effective date would impact the loss and premium trend periods used in the filing. Changes in trend periods would impact projected losses, premiums, and fixed expenses used to calculate the rate level indications.

If the effective data were to change, advance notice of 105 days is required for an orderly implementation of the change in rates.

(8c) Not Applicable.

All investment income and investment deductions based on A.M. Best's Aggregates and Averages; Underwriting & Investment Exhibit, Part 1, Col. 8

(4) For accident years 2015 - 2017, 30% of dividend income from held securities is subject to tax, hence the tax rate = 35% x .30 = 10.5%

For accident years 2018 - 2019, 50% of dividend income from held securities is subject to tax, hence the tax rate = 50% x .21 = 10.5%

(17) weighted average of (14) and (15)

**North Carolina
Mobile Homeowners
MH(C)**

North Carolina Administrative Code (NCAC) Title 11, Chapter 10.1105, Section (11)
Statistical Plans & Programs

(11a) The list below identifies the applicable data calls and the data utilized:

Data Calls

North Carolina Rate Bureau 2020 Mobile Homeowners Data Call
Annual Statement for Calendar Year 2019
Insurance Expense Exhibit for Calendar Year 2019
RB Calls for 2019 North Carolina Expense Experience
Mobile Home Census Data

- (11b) The North Carolina Rate Bureau certifies that there is no evidence known to it or, insofar as it is aware following reasonable inquiry, to Milliman that the data which were collected under the data calls identified in response (11)(a) above and used in the filing are not materially true and accurate representations of the experience of the companies whose data underlie such experience. While the Rate Bureau is aware that the collected data sometimes require corrections or adjustments, the Rate Bureau's review of the data, the data collection process, and the ratemaking process indicates that the aggregate data are reasonable and reliable for ratemaking purposes. See also the prefiled testimony of P. Anderson.
- (11c)
1. After receiving the data provided by each member company, each data set is checked to verify that all fields represented as part of each plan are included in the data and that the values for each record are appropriate for the given field. For instance, numeric fields are checked to make sure that only numeric data is reported.
 2. Record count and exposure distributions are then summarized for every field included in each dataset to identify unusual, unexpected, or missing values as well as unintuitive distributional relationships.
 3. Univariate statistical summaries are then run on all numeric fields, such as premiums, losses, and exposures, to identify outliers or unusual values.
 4. When appropriate, records with missing values are overridden to an appropriate null or missing value. For instance, for numeric fields such as claim counts and losses, records with missing values are set to 0. For text fields, records with missing values might be set to "Missing."
 5. Loss, premium, and exposure data by individual company was then summarized and compared to data provided by member companies from the most recent Mobile Homeowners filing for consistency. When inconsistencies are noted, the member companies are subsequently notified so that the inconsistencies can be verified.
 6. Incurred loss, written and earned premium, and exposure data was aggregated across all member companies and summarized by calendar / accident year to compare against statistical plan data from the most recent Mobile Homeowners filing for consistency.
 7. The average written premium, average earned premium, average incurred severity, frequency, and incurred pure premium are summarized by member company and in aggregate for each field included in each dataset. These metrics are also summarized for each field by calendar / accident year, policy form, and coverage. The summaries are also compared to data summaries from the most recent Mobile Homeowners filing for consistency, to the extent that prior data is available. These summaries were reviewed to identify inconsistencies in the data. When inconsistencies are noted, the member companies are subsequently notified so that the inconsistencies can be verified.

**North Carolina
Mobile Homeowners
MH(C)**

North Carolina Administrative Code (NCAC) Title 11, Chapter 10.1105, Section (13)
Required Surplus

- (13a) The weighted average premium to surplus ratios (weighted by North Carolina Mobile Homeowners Direct Premiums Written) for the calendar years 2010-2019 for the company groups which wrote the coverages in each of those years, based on data from the North Carolina Rating Bureau and S&P Global Market Intelligence, are:

Calendar Year	Premium to Surplus Ratio
2010	1.14
2011	1.23
2012	1.23
2013	1.20
2014	1.24
2015	1.23
2016	1.25
2017	1.38
2018	1.36
2019	1.45

- (13b) The expected weighted average premium to surplus ratio for all companies writing Mobile Homeowners insurance during the years the proposed rates are expected to be in effect is estimated to be 1.29. See the prefiled testimony of G. Zanjani.
- (13c) The necessary level of capital and surplus to support particular coverages varies by line, and the Rate Bureau regards the ratios shown in (a) as indicative of levels typical within the industry for the lines of business covered by this filing. The actual level of capital and surplus needed to support premium writings without endangering the solvency of a company is dependent upon (among others) the financial structure and investments unique to each company, the relationship of the company with affiliated companies as a group (and the experience of the affiliated companies), the mix of business of each company, and the conditions of the economy as they affect each company's individual circumstances. The Rate Bureau is advised that the National Association of Insurance Commissioners, as one of several criteria, generally considers that a premium to surplus ratio for an individual company of 3 to 1 warrants close regulatory attention and monitoring with respect to the company's solvency position.
- (13d) The Rate Bureau has determined the premium to surplus ratios for Mobile Homeowners insurance in North Carolina based on the weighted average premium to surplus ratios for insurance groups writing Mobile Homeowners insurance in North Carolina, where the weights are the actual premiums written. The premium to surplus ratios of the insurers actually writing this business in North Carolina are representative of the leverage relevant for this line and state. The Rate Bureau has not further allocated surplus within these insurers across lines and states in this or other filings in North Carolina.

**North Carolina
Mobile Homeowners
MH(C)**

North Carolina Administrative Code (NCAC) Title 11, Chapter 10.1105, Section (14)
Additional Information Requested by the Commissioner

(14a) See pre-filed testimony of G. Zanjani, J. Vander Weide and P. Anderson.

(14b) Not Applicable to Mobile Homeowners rate filings.

(14c) Not Applicable to Mobile Homeowners rate filings.

(14d) The items below summarize the changes in methodology, approach, or presentation from that used in the Rate Bureau's 2019 mobile homeowners rate filing:

- (1) The prior filing relied on available statistical data provided by the various statistical agents in North Carolina. For this filing, Milliman collected the data used in its analysis directly from the Rate Bureau member companies.
- (2) To account for loss adjustment expenses (LAE) in the prior filing, an LAE factor selected based on the relationship of industry incurred LAE to industry incurred losses in North Carolina was applied to the available statistical incurred losses. For this filing, both losses and allocated loss adjustment expenses (ALAE) were collected from member companies, and an unallocated loss adjustment expense (ULAE) factor selected based on industry incurred ULAE to industry incurred loss & ALAE was applied to the collected incurred loss & ALAE to account for ULAE.
- (3) Similar to the excess wind methodology utilized in both the current and prior filing, a non-hurricane excess flood methodology was introduced in this filing to reduce volatility in rates due to the volatile nature of flood losses.
- (4) This filing calculates premium trends using average rating factors. The prior filing referred to this as exposure trend. In addition, the prior filing reviewed these trends by deductible and then calculated a weighted average trend factor based on the trend factors by deductible. In this filing, premium trends are not evaluated by deductible.
- (5) In this filing, the exposures that were used in the hurricane model runs were first trended to the period the rates will be in effect (i.e., six months beyond the assumed effective date of 11/1/2021). No additional trend was applied to the modeled hurricane losses. In the prior filing, a loss trend factor was applied to the modeled losses and no trend was applied to the exposures.
- (6) In this filing, the projected Beach and FAIR Plan hurricane losses used in the Compensation for Assessment Risk analysis were determined by using the Beach and FAIR Plans' modeled losses for the previous storm season (the 2019 storm season). Those losses were adjusted to the 2020 storm season based on the impact of changes in the underlying exposures and the hurricane models, because the modeled losses for the 2020 storm season were not available. In the prior filing, the modeled losses for the then-current storm season were available and were used.
- (7) This filing revises amount of insurance relativities. Additional deductible options are also being introduced.
- (8) In this filing, the pro forma profit analysis reflects investment income on reinsurance balances. In the prior filing, this adjustment was not included.

Glossary

Model Parameters

	RMS	AIR
Model Version	RiskLink v18.1	Touchstone v7
Event Set	2019 Historical	100k Standard
Demand Surge	Included/Excluded	Included/Excluded
Storm Surge	Included	Included

RMS Fields

Code	Name	Definition
EventID	Event Identifier	Event identification code, which represents a specific event.
RATE	Rate	Frequency at which a given event occurs according to the model. Also known as primary uncertainty, or the likelihood that an event will occur.

AIR Fields

Code	Name	Definition
EventID	Event Identifier	Combination of model code, which represents event type, and event identification code which represents a specific event.
Year	Catalog Year	AIR uses a stochastic catalog containing potential scenarios of events in a year. The "year" field represents the simulated year in the catalog.

Loss Fields

Code	Name	Definition
GU_Loss	Ground Up Loss	Pure modeled loss that does not take into account limits or deductibles. These losses also account for a Cat LAE factor.
GR_Loss	Gross Loss	Modeled loss taking into account limits and deductibles. These losses also account for a Cat LAE factor.
wDS	Demand Surge	Includes amplification of losses to account for the fact that after a catastrophe occurs, demand for building materials and/or labor increases, causing the cost of those to increase as well.
xDS	without Demand Surge	Demand Surge excluded.

Windfall Parameter Fields

Code	Description
Landfall State	State in which storm made first US landfall or bypass. For events that have no landfall/bypass in the US, this field contains the country/region of first landfall/bypass.
Landfall County	US County in which storm made first US landfall or bypass. For events that have no landfall/bypass in the US, this field is blank.
SS_Intensity	Saffir-Simpson storm intensity of the storm, based on wind speed at the point wind speed is assigned (below).
WindSpeed	Wind speed in MPH. RMS landfalling: Maximum wind speed at the 6 hourly point before landfall. RMS bypassing: maximum wind speed at the bypass gate center. AIR: Maximum wind speed at point 1 hour prior to landfall/bypass.

EventID	Rate	GU_Loss_wDS	GR_Loss_wDS	GU_Loss_xDS	GR_Loss_xDS	LandfallState	LandfallCounty	Windspeed	SS_Intensity
